An ISO 9001 / 2008 Registered Company

*Quality so good, it's used
and endorsed by 10 of the 15 largest
automobile manufacturers.*

RUST INHIBITOR

- Fogging method penetrates crevices, cavities and other rust-prone areas for maximum protection
- Odorless wax-based formula bonds permanently, forming a clear, waterproof, salt-resistant seal
- Applied through existing body holes ... no drilling required
- Will not restrict or plug critical drain holes
- One-time application will extend outer panel life, which could help increase vehicle re-sale value

UNDERCOAT

- Superior, black wax-based formula seals the underside of your vehicle against road salt, dirt, stone and gravel abrasion
- Acts as a sound deadener for a quieter ride
- Remains flexible and pliable for better adhesion to today's unibody frame construction
- Special additives provide superior adhesion and resilience
- Will not run or drip at high temperatures or become brittle in sub-zero weather
- Contains no tar-like ingredients that attack body coatings
- Developed for today's advanced-engineered vehicles
- Gives a black uniform appearance to underbody and wheel wells

Using existing body holes, fogging spray application penetrates hard-to-reach cracks and crevices, providing maximum protection from inside out rust-through.

Untreated underbody is exposed to corrosive elements.

Treated surface is sealed and protected from corrosive elements.
