

PRODUCT DATA SHEET

Leather / Vinyl Protector / VG-105

VOC compliant

Automobile Manufacturer Engineering Approved

Features: A true coating, not just a dressing, *ValuGard Leather/Vinyl Protector* is an acrylic latex emulsion with an ultra violet barrier added to help prevent fading of leather and vinyl upholstery. Unlike silicone dressings, *ValuGard Leather/Vinyl Protector* is not slippery and does not attract dry soil.

Benefits: Non-greasy long lasting coating (3 years), that helps prevent fading, staining, scratching, even cigarette burns! The ultimate protection for premium interiors.

Uses: Leather, vinyl and surfaces in cars, trucks, boats and recreational vehicles.

Directions: Apply evenly to all interior leather and vinyl surfaces using a clean sponge or lint free soft cloth. Product may appear to have a slightly blue tint upon initial application. *This is normal*, the product will dry perfectly clear.

Tips: If product beads or “fish eyes”, a silicone release agent or dressing has been used on the material. This can easily be removed with *ValuGard New Car Prep*.

Sizes: VG-105 = 12/3.5 oz. bottles per case
