

TIM'S TECH TIPS

New Car Prep (VG-N122) Vs. Auto Body Prep (VG-P125)

Both products are a blend of paint and trim safe solvents.

New Car Prep is used as a tar, wax, grease, under coat, rust inhibitor and adhesive/glue remover for smaller areas. New car prep may leave a light film behind.

New Car Prep may be used as a spot remover to remove grease from interiors.

Auto Body Prep is a wax, organic transit coating, under coat and rust inhibitor remover for larger areas, Such as overspray from the entire vehicle. May also be used to clean under coating overspray from floors and walls.

Auto Body Prep has an emulsifier added to the formula that allows the product to be rinsed cleanly from the vehicles surfaces. Product will turn white when rinsed with water.

It is always recommended to wash vehicle with Detail Wash (VG-C104) after using Auto Body Prep on the entire vehicle to ensure its complete removal.

Neither product contains Toluene, Xylene or Benzene.
